WORK EXPERIENCE

CANN Forecast

Montreal, Quebec.

Software Engineer - Full Stack Developer

September 2023 – September 2024

- Managed PostgreSQL databases, built ETL pipelines with Pandas, and performed spatial analysis using QGIS and GeoPandas for over 10 water infrastructure projects.
- Collaborated with 5+ domain experts to develop React based interfaces, interactive maps using Leaflet.js and Mapbox, and visualizations with D3.js, enhancing accessibility and enabling data-driven decisions for 100+ users.
- Automated email attachment processing via Python (IMAP/SMTP), cutting manual work by 90%, and integrated the solution with Jenkins, resulting in faster deployment cycles and reduced processing time by 4 hours per day.
- Engineered scalable backend systems in Django, exposing RESTful APIs that supported dynamic front-end functionality, serving over 500 concurrent users.

Hifi Engineering

Calgary, Alberta.

Software Engineer - Machine Learning Engineer

September 2022 – July 2023

- Designed and implemented ML models for sensor data analysis, achieving 95% accuracy in simulated pipeline leak detection using Keras and TensorFlow.
- Reduced false positives by 15% through close collaboration with domain experts during model tuning and optimization.
- Improved system sensitivity by 20% via rigorous validation, significantly enhancing real-world reliability.
- Communicated technical results to both technical and non-technical stakeholders, contributing to a projected 30% reduction in operational risk.

Woodstock Electronics Limited

Lagos, Nigeria.

Web Developer

October 2019 – June 2022

- Enhanced platform functionality through full-stack development, resulting in a 20% increase in user engagement.
- Built responsive user interfaces, reducing page load times by 25% and improving overall user experience.
- Developed RESTful APIs and integrated them with MySQL using Symfony, improving data retrieval speed by 30%.
- Maintained and updated the company's homepage using WordPress, effectively showcasing products and enhancing online visibility.

EDUCATION

Master's Degree, Software Engineering (MEng)

May 2021 – June 2023

University of Calgary

Calgary, Alberta.

GPA: 3.85 / 4.00

Bachelor's Degree, Electrical and Electronics Engineering (BEng)

October 2015 – July 2018

Loughborough University

Loughborough, United Kingdom.

2nd Class Upper (GPA Equivalent: 3.72 / 4.00)

SKILLS

Languages & Frameworks: *JavaScript, TypeScript, React, Node, Next.js, Express, Python, Django, PHP, Laravel, Java, Spring Boot, Ruby on Rails, Go, C#, ASP.NET, SQL, NoSQL, C/C++, TensorFlow, Keras, Scikit-learn, Pandas, NumPy.*

Tools & Platforms: *AWS, Azure, Docker, Kubernetes, Git, GitHub, Jenkins, Jira, Trello, Postman, WordPress, QGIS, Google Analytics, Anaconda, OpenCV.*

Technical & Soft Skills: *Frontend & Backend Development, REST APIs, GraphQL, Microservices, Machine Learning, Object-Oriented & Functional Programming, CI/CD, Unit & Automated Testing, Software Development Lifecycle, SOLID Principles, Design Patterns, Agile/Scrum, ETL.*

TECHNICAL PROJECTS

Email Attachment Uploader/Downloader: <https://github.com/oluwajolasun/Email-Automation-for-Client-Data>

- Automated attachment handling using Python's IMAP/SMTP libraries, cutting 90% of manual effort.
- Integrated with Jenkins for seamless deployment and CI/CD workflows.

Novel CNN for Fish Classification (FishNet): https://github.com/oluwajolasun/ENEL645_FinalProject_FishClassification

- Designed a custom CNN ("Fishnet") achieving 99.3% test accuracy with regularization techniques.
- Benchmarked against VGG16 and EfficientNetB1 using transfer learning on a 9,430-image dataset.

Student Course Registration System: <https://student-registration-system-uofc.netlify.app/>

- Developed REST API backend with CRUD support for course registration.
- Built a React.js frontend offering a responsive and intuitive student dashboard.
